spect of these islands, from the official days of John Quincy Adams and of Daniel Webster to the present time. In all that period, we have avowed the superiority of our interests to those of all other nations, and have always refused to embarrass our freedom of action by any alliance or arrangement with other powers as to the ultimate possession and government of the islands. Before stating the present political condition of the little kingdom, it is well to review the substantial data as to its area, its resources, its financial and business condition, its capabilities of material development, its population, the status of its landed property, its government, revenues, and expenditures, etc.

PHYSICAL DIMENSIONS.

The total area of the kingdom is about 6,000 square miles. Not including several small islands of little importance, the chief value of the land area is in the six islands of Oahu, Kauai, Maui, Molokai, Lanai, and Hawaii, the last named being nearly the size of all the rest of the group. The plains, valleys, and lowlands are fertile, while the highlands are adapted to the raising of extensive herds of cattle, horses, and sheep. The arable lands are adapted to the production of sugar, coffee, rice, bananas, oranges, lemons, pineapples, grapes and maize. Of the arable lands only such as are fitted for the production of sugar and rice have been much brought into use. The coffee raised is of superior quality, and finds ready market for home consumption and in San Francisco. There is no doubt that this product can be greatly extended. This opinion is sustained by the examination of experts and has been verified by successful results in coffee-raising, to which there is now being given special attention.

The banana culture can be greatly extended, and the opportunities for the production of oranges are large and promising. Ripening at a time in the year different from those of southern California, the Hawaiian oranges can find a ready market in San Francisco, and especially in the cities of Oregon and Washington, where the islands procure most of their lumber for buildings and fences, and from which they procure coal, the consumption of which will necessarily increase for use in the sugar mills and the supply of steamers. For a quarter of a century the profits of sugar-raising have tended to divert capital and enterprise almost exclusively to the cane culture, to the neglect of the other industries and interests of the islands. Good government and the building of necessary roads and bridges, the Government assumption of the "crown lands," and the conversion of them into small homesteads for raising the crops already specified, would speedily stimulate general prosperity and increase the American and European families and freeholders, and aid to constitute a large number of responsible voters, thus giving stability to legislation and government.

There are nearly 900,000 acres of "crown lands," and these, in the main, are among the most valuable of the islands. The rent paid for them goes to the Sovereign, and the amount of the income received is no doubt much less than it would be if these lands were owned and managed by private individuals. There have long been more or less abuses in the leasing of these lands, and it is well understood that the leases have been prolific sources of political favoritism and corruption. Well handled and sold at fitting opportunities, the proceeds of the crown lands would pay the national debt, provide adequate pensions for the two or three royalties, in case monarchy should
